## PROFESSIONAL SUMMARY

MCA student and Linux power user with a strong foundation in system automation and shell scripting. Experienced in developing and deploying web applications using Python, Django, and Git. Passionate about streamlining infrastructure through CI/CD and containerization, aiming to leverage hands-on experience in Linux environments to support cloud operations, automate workflows, and enhance deployment pipelines.

## EDUCATION

|                                                                                                                |                                  |

## PROJECTS

- Digivalrex — Academic Evaluation Platform** | *Django, PostgreSQL, AWS EC2, AWS S3, Cloudflare R2, HTMX*
- Built a robust, role-based digital evaluation system handling a multi-stage approval workflow (Examiner → Chairperson → COE).
  - Deployed a scalable mark-entry pipeline on AWS EC2 using async task processing (Django-Q) and Cloudflare R2.
  - Implemented an advanced accessibility panel supporting dyslexia-friendly fonts, colorblind modes, and WCAG-compliant high-contrast themes.
- System Resource Monitor** | *Java Swing, PostgreSQL, System Operations*
- Developed a robust application for real-time infrastructure monitoring, tracking live CPU, memory, and disk I/O metrics with minimal overhead.
  - Implemented a logging system via PostgreSQL, successfully recording monitoring sessions and 100+ historical snapshots.
  - [github.com/shyamjames/SystemResourceMonitor](https://github.com/shyamjames/SystemResourceMonitor)
- Email Spam Detection** | *Python, Django, Git*
- Built and fully deployed a spam detection system spanning a production backend, achieving high classification accuracy.
  - Managed the complete application lifecycle, from backend development to version control through Git and cross-platform Android/Web integration.
